

MOTOROLA

Dual 1-of-4 Decoder/ Demultiplexer

**ELECTRICALLY TESTED PER:
MIL-M-38510/32601**

The 54LS155 is a high-speed Dual 1-of-4 Decode/Demultiplexer. The device has two decoders with common 2-bit Address inputs and separate gated Enable inputs. Decoder "a" has an Enable gate with one active HIGH and one active LOW input. Decoder "b" has two active LOW Enable inputs. If the Enable functions are satisfied, one output of each decoder will be LOW as selected by the address inputs.

The 'LS155 is fabricated with the Schottky barrier diode process for high speed and is completely compatible with all Motorola TTL families.

- Schottky Process For High-Speed
- Multifunction Capability
- Common Address Inputs
- True or Complement Data Demultiplexing
- Input Clamp Diode Limits High-Speed Termination Effects

FUNCTIONAL DESCRIPTION

The 'LS155 is a Dual 1-of-4 Decoder/Demultiplexer with common Address inputs and separate gated Enable inputs. When enabled, each decoder section accepts the binary weighted Address inputs (A_0, A_1) and provides four mutually exclusive active LOW outputs ($\bar{O}_0\text{--}\bar{O}_3$). If the Enable requirements of each decoder are not met, all outputs of that decoder are HIGH.

Each decoder section has a 2-input enable gate. The enable gate for Decoder "a" requires one active HIGH input and one active LOW input ($E_a \bullet \bar{E}_a$). In demultiplexing

applications, Decoder "a" can accept either true or complemented data by using the \bar{E}_a or E_a inputs respectively. The enable gate for Decoder "b" requires two active LOW inputs ($\bar{E}_b \bullet \bar{E}_b$). The 'LS155 can be used as a 1-of-8 Decoder/Demultiplexer by tying \bar{E}_a to E_b and relabeling the common connection as (A_2). The other \bar{E}_b and \bar{E}_a are connected together to form the common enable.

The LS155 can be used to generate all four minterms of two variables. These four minterms are useful in some applications replacing multiple gate functions as shown in Figure a.

TRUTH TABLE													
Address		Enable "a"		Output "a"				Enable "b"		Output "b"

NOTES:

1. The pulse generator has the following characteristics: PRR ≤ 1.0 MHz, tr = 15 ns, tf ≤ 6.0 ns.
2. CL = 50 pF ± 10% including scope probe, wiring and stray capacitance without package in test fixture.
3. RL = 2.0 kΩ ± 5.0%.
4. All diodes are 1N3064 or equivalent.
5. The limits specified for CL = 15 pF are guaranteed but not tested.
